

**making a world of difference**

There are plenty of companies that will tell you how to make your own business work better.

Whether curbing your energy consumption, reducing your carbon footprint or making your plant operate more reliably and efficiently, there's a plethora of advice and information available - some of it conflicting, some of it confusing, and a lot of it reliant upon you putting your trust in sources with a vested interest in having you adopt their proprietary solutions.

So what makes Controls4Steam different?

Well, to begin with, the clue is in our name. We specialise in supporting businesses that are major users of steam for manufacturing processes and space heating. Our expertise originates from more than 30 years of working with commercial and industrial steam users to provide bespoke solutions for the safe and efficient generation and distribution of steam.

But more than that, we are not allied to any equipment manufacturers, energy providers or contractors.

***... engineered solutions to more that satisfy your performance criteria and expectations.***

Instead, we work in partnership with our clients, providing an independent support structure with dedication, commitment and an unrivalled wealth of technical knowledge and expertise in steam systems and process fluid control technology.

It's because of our autonomy that we believe we can make a world of difference to the way we work with you. Our approach to every project and every technical challenge is different, because so often there is no single solution. However, by combining our expertise with the huge range of tried and tested products and systems available from manufacturers worldwide, we have the flexibility to create engineered solutions to more that satisfy your performance criteria and expectations.

Furthermore, we'll then continue to work with you to provide on-going technical support and advice. At Controls4Steam we don't just provide long-term engineered solutions, we look for long-term partnerships with our clients too.

With that level of commitment, it's little wonder that Controls4Steam has successfully partnered a host of blue-chip companies and makers of household brand names, as well as local authorities, private sector businesses and market leaders in the provision of energy management systems, to implement solutions that will ensure steam remains the heat source of choice for many years to come.

Working in partnership with:

- ▶ regional health authorities
- ▶ contract energy management specialists
- ▶ aerospace companies
- ▶ food processors
- ▶ pharmaceutical manufacturers
- ▶ animal feed producers
- ▶ paint & varnish manufacturers
- ▶ textile makers
- ▶ oil & petrochemical processors

... on projects including:

- ▶ boilerhouse design & installation
- ▶ boiler feed tank upgrade & renewal
- ▶ heat exchanger design & implementation
- ▶ energy conservation surveys
- ▶ instrumentation, control & process monitoring systems
- ▶ design & manufacture of special purpose machinery
